

Twitter project

How to run

Dependencies

This script has been tested on `Node.js v16.14.0` on `Debian GNU/Linux`. It needs `Node.js` version `>16`.

To run this script, you need an API key from Twitter. Once you have one, you need to install the npm dependencies, then run the script with `API_KEY` as an environment variable as to not hardcode it into the script. The next section goes over how to install the necessary dependencies and run the script.

Steps

1. `yarn` or `npm install` (prefer `yarn`)
2. `API_KEY=<twitter api key> node main.js`
